Dear Jon

Thank you for your interest in the work at Great Hagley. The woods at Gt Hagley is currently comprise unmanaged broadleaves and conifers with difficult access to most areas. In the long term it is intended to bring the woods into management through the thinning of the mature broadleaved woods and phased felling and restocking of the conifers. The younger plantings will be cleaned and thinned with the intention of growing a reasonable quality crop. (Managed woodland is more resilient to climate change and pest and diseases etc.)

Under the conditions of the felling permissions we are required to restock felled areas. The mature conifer stand scheduled to be felled will be restocked with Douglas fir and Norway spruce, the small broadleaf area to be selectively felled will be replanted with mixed native broadleaves. Other areas of woodland will be thinned as per Map 3 and we will be putting in some access tracks as per map 4. The proposed response to the risks posed to the woodland are outlined in section 4 of the Management Plan.

Kind regards

John Evans

Subject: Fwd: Management Plan Great Hagley Woods

John

Thanks very much for sight of your plan for Great Hagley Woods.

I can see from the maps attached to your e-mail the felling that is due over the next ten years. I expect there is more to your plan than just felling, for example will you be replanting? and if so will it be like for like or are you (as the Forestry Commission are doing in local woods) intending to increase the proportion of broadleaf trees. I think understanding your plans in terms of how they might improve the local environment and managing risks would be useful information for us to be able to constructively respond to your consultation.

Regards

Jon
